

FPA Crescent Fund

PROSPECTUS

FPA Crescent Fund (FPACX) seeks to generate equity-like returns over the long-term, take less risk than the market and avoid permanent impairment of capital. The Fund's portfolio managers employ a strategy of selectively investing across a company's capital structure in a combination of equity and debt securities that they believe have the potential to increase in market value, seeking to achieve rates of return with less risk than the broad U.S. equity indices.

THE SECURITIES AND EXCHANGE COMMISSION HAS NOT APPROVED OR DISAPPROVED THESE SECURITIES OR PASSED UPON THE ACCURACY OR ADEQUACY OF THIS PROSPECTUS. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.

FUND SUMMARY

Investment Objective

The Fund seeks to generate equity-like returns over the long-term, take less risk than the market and avoid permanent impairment of capital.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. The table and example below do not reflect commissions that a shareholder may be required to pay directly to a broker or other financial intermediary when buying or selling shares of the Fund.

Shareholder Fees (fees paid directly from your investment)

| | |
|---|-------|
| Maximum Sales Charge (Load) Imposed on Purchases (as a percentage of offering price) | None |
| Maximum Deferred Sales Charge (Load)(as a percentage of original sales price or redemption proceeds, as applicable) | None |
| Redemption Fee (as a percentage of amount redeemed on shares held 90 days or less) | 2.00% |
| Exchange Fee | None |

Annual Fund Operating Expenses (expenses that are deducted from Fund assets)

| | |
|--|-------|
| Management Fees | 1.00% |
| Distribution (12b-1) Fees | None |
| Other Expenses | 0.07% |
| Dividend and Interest Expense on Short Sales | 0.02% |
| Total Other Expenses | 0.09% |
| Total Annual Fund Operating Expenses | 1.09% |

Example. This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

| One Year | Three years | Five years | Ten years |
|----------|-------------|------------|-----------|
| \$111 | \$347 | \$601 | \$1,329 |

Portfolio Turnover. The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect

the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 35% of the average value of its portfolio. The Fund's portfolio turnover rate may vary from year to year as well as within a year.

Principal Investment Strategies

To pursue the Fund's investment objective, the Fund's portfolio managers ("portfolio managers") invest in both equity and debt securities of companies. The Fund's portfolio managers believe that this combination of securities broadens the universe of opportunities for the Fund, offers additional diversification and helps to lower volatility. The portfolio managers invest primarily in equity securities and the balance of the Fund's portfolio in debt securities, cash and cash equivalents. The Fund has no limit on the amount of assets it may invest in non-U.S. securities. The decision to invest in a non-U.S. security will be based on the portfolio managers' fundamental security analysis. In addition, the Fund may sell securities short, and the portfolio managers may employ a short selling strategy for a portion of the Fund.

Equity securities represent an ownership interest, or the right to acquire an ownership interest, in an issuer. Different types of equity securities provide different voting and dividend rights and priority in case of the bankruptcy of the issuer. The Fund may invest in a variety of equity securities, including common stocks, preferred stocks, convertible securities, rights and warrants.

The portfolio managers look for large and small companies that it believes to have excellent future prospects that are undervalued by the securities markets. The portfolio managers believe that these opportunities often arise when companies are out-of-favor or undiscovered by most of Wall Street. The portfolio managers also search for companies that offer earnings growth, opportunity for price/earnings multiple expansion and the best combination of such quality criteria as strong market share, good management, high barriers to entry and high return on capital.

Using fundamental security analysis, the portfolio managers may look for investments that trade at a substantial discount to the portfolio managers' determination of the company's value (absolute value) rather than those that might appear inexpensive based on a discount to their peer groups or the market average (relative value). The portfolio managers attempt to determine a company's absolute value using fundamental security analysis, which they believe generally provides them with a thorough view of a company's financial and business characteristics. As a part of their process, the portfolio managers may:

- Review stock prices or industry group under-performance, insider purchases, management changes and corporate spin-offs.
- Communicate directly with company management, suppliers, and customers.
- Use their judgment to define the company's future potential, financial strength and competitive position.

The portfolio managers generally seek to sell an equity investment when they believe that the company's value has been fully reflected in a higher valuation by the market or when a negative

fundamental development occurs in the company or its industry that the portfolio managers believe could significantly impact future earnings growth.

A debt security is an interest-bearing security that companies or governments use to borrow money from investors. The issuer of a debt security promises to pay interest at a stated rate, which may be variable or fixed, and to repay the amount borrowed at maturity (the date when the debt security is due and payable). The Fund may invest in debt securities issued by companies, the U.S. government and its agencies; mortgage-backed and asset-backed securities (*i.e.* securities that are backed by pools of loans or mortgages assembled for sale to investors); municipal notes and bonds; and commercial paper and certificates of deposit.

The portfolio managers invest in debt securities seeking to provide the Fund with a reliable and recurring stream of income, while seeking to preserve its capital. The Fund may also invest in debt securities rated below investment grade (“high yield bonds” or “junk bonds”). The Fund has the ability to invest up to 65% of its total assets in debt securities, although it will generally invest a greater percentage of its portfolio in equity securities than debt securities.

The portfolio managers select debt securities by using an approach that is similar to the approach they use to select equity securities and by trying to forecast current interest rate trends. The portfolio managers generally employ a defensive interest rate strategy, which means they seek to keep the average maturity of the debt-securities portion of the Fund to 10 years or less, by investing at different points along the yield curve. The portfolio managers also continually consider yield spreads and other underlying factors such as credit quality, investor perception and liquidity to determine which sectors offer the best investment value at any given time.

The portfolio managers may engage in a strategy known as selling short. Selling a security short is when the Fund sells a security it does not own. To sell a security short, the Fund must borrow the security from someone else to deliver to the buyer. The Fund then replaces the security it borrowed by purchasing it at the market price at or before the time of replacement. Until it replaces the security, the Fund repays the person that lent it the security for any interest or dividends that may have accrued during the period of the loan. The Fund typically sells securities short to take advantage of an anticipated decline in prices or to protect a profit in a security it already owns.

Principal Risks

Risks Associated with Investing in Equities. Equity securities, generally common stocks and/or depositary receipts, held by the Fund may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect the securities markets generally, such as adverse changes in economic or political conditions, the general outlook for corporate earnings, interest rates or investor sentiment. Sustained periods of market volatility, either globally or in any jurisdiction in which the Fund invests, may increase the risks associated with an investment in the Fund. Equity securities may also lose value because of factors affecting an entire industry or sector, such as increases in production costs, or factors directly related to a specific company, such as decisions made by its management. Equity securities generally have greater price volatility than debt securities. The Fund’s shares are not bank deposits and are not guaranteed, endorsed or insured by any financial institution, government authority or the FDIC.

Interest Rate Risk. As with most funds that invest in debt securities, changes in interest rates are one of the most important factors that could affect the value of an investment in the Fund. Interest rate risk is the risk that debt securities will decline in value because of increases in interest rates. If interest rates were to rise from a low level, fixed income securities markets may experience lower prices, increased volatility and lower liquidity. The negative impact on fixed income securities from rate increases, regardless of the cause, could be swift and significant, which could result in significant losses by the Fund, even if such rate increases are anticipated by the portfolio managers.

Credit Risk. Credit risk refers to the likelihood that an issuer will default on the payment of principal and/or interest on a security. Various factors could affect the issuer's actual or perceived willingness or ability to make timely interest or principal payments, including changes in the issuer's financial condition or in general economic conditions. High yield bonds, commonly referred to as "junk" bonds, are highly speculative securities that are usually issued by smaller, less credit-worthy and/or highly leveraged (indebted) companies. Compared with investment-grade bonds, high yield bonds carry a greater degree of risk and are less likely to make payments of interest and principal. Market developments and the financial and business conditions of the corporation issuing these securities influence their price and liquidity more than changes in interest rates, when compared to investment-grade debt securities. Insufficient liquidity in the high yield bond market may make it more difficult to dispose of high yield bonds and may cause the Fund to experience sudden and substantial price declines. A lack of reliable, objective data or market quotations may make it more difficult to value high yield bonds accurately. There is no limit on the ratings of high yield securities that may be purchased or held by the Fund, and the Fund may invest in securities that are in default.

Call Risk. Issuers of callable bonds are permitted to redeem these bonds before their final maturity. If an issuer calls a security in which the Fund is invested, the Fund could lose potential price appreciation and be forced to reinvest the proceeds in securities that bear a lower interest rate or more credit risk.

Market Risk. The market price of investments owned by the Fund may go up or down, sometimes rapidly or unpredictably. Fund investments may decline in value due to factors affecting the overall markets, or particular industries or sectors. The value of a holding may decline due to general market conditions that are not specifically related to a particular issuer, such as real or perceived adverse economic conditions, changes in the general outlook for an issuer's financial condition, changes in interest or currency rates, domestic or international monetary policy or adverse investor sentiment generally. The value of a holding may also decline due to factors that affect a particular industry or industries, such as competitive conditions within an industry or government regulations. The Fund may experience heavy redemptions, which could cause the Fund to liquidate its assets at inopportune times or at a loss or depressed value, which could cause the value of an investment in the Fund to unexpectedly decline. Shareholder redemptions may also cause the Fund to engage in "odd-lot" fixed income transactions, which due to their small size, may result in the Fund receiving substantially lower value in such transactions than if the Fund had engaged in a large block trade of such securities. In addition, the Fund may rely on various third-party sources to calculate its net asset value. Errors or systems failures and other technological issues may adversely impact the Fund's calculation of its net asset value, and such net asset value calculation issues may result in inaccurately calculated net asset values, delays in net asset value calculation and/or the inability to

calculate net asset values over extended periods. The Fund may be unable to recover any losses associated with such failures.

Risks Associated with Investing in Smaller-Cap and Mid-Cap Companies. The prices of securities of mid-cap and smaller-cap companies tend to fluctuate more widely than those of larger, more established companies. Mid-cap and smaller-cap companies may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or market averages in general. In addition, these companies often have shorter operating histories and are more reliant on key products or personnel than larger companies. The securities of smaller- or medium-sized companies are often traded over-the-counter, and may not be traded in volumes typical of securities traded on a national securities exchange. Securities of such issuers may lack sufficient market liquidity to effect sales at an advantageous time or without a substantial drop in price.

Risks Associated with Investing in Non-U.S. Securities. Non-U.S. investments (including depositary receipts) can be riskier, more volatile and less liquid than investments in the United States. Adverse political, social and economic developments or instability, or changes in the value of non-U.S. currency can make it more difficult for the Fund to sell its securities and could reduce the value of the Fund's shares. Differences in regulatory, tax and accounting standards and differences in reporting standards may cause difficulties in obtaining information about non-U.S. companies and may negatively affect investment decisions. Investments in non-U.S. securities may be affected by restrictions on receiving investment proceeds from outside the U.S., confiscatory tax laws, and potential difficulties in enforcing contractual obligations. Transactions may be subject to less efficient settlement practices, including extended clearance and settlement periods. In addition, global economies are increasingly interconnected, which increases the possibility that conditions in one country or region might adversely impact a different country or region.

Risks Associated with Investing in Emerging Markets. In investing the Fund's assets, the portfolio managers focus on countries with established rules of law and political systems that allow for transparent and unbiased enforcement of those laws, although there can be no assurance that the Fund's assets will in all cases be invested in countries that offer such protections, and such investments may be subject to heightened risk. The Fund's investments in non-U.S. issuers in developing or emerging market countries may involve increased exposure to changes in economic, social and political factors as compared to investments in more developed countries. The economies of most emerging market countries are in the early stage of capital market development and may be dependent on relatively fewer industries. As a result, their economic systems are still evolving. Their legal and political systems may also be less stable than those in developed economies. Securities markets in these countries can also be smaller, and there may be increased settlement risks. Emerging market countries often suffer from currency devaluation and higher rates of inflation. Due to these risks, securities issued in developing or emerging countries may be more volatile, less liquid, and harder to value than securities issued in more developed countries.

Risks Associated with Short Selling. The Fund can lose money if the price of the security it sold short increases between the date of the short sale and the date on which the Fund replaces the borrowed security. These losses are theoretically unlimited. To borrow the security, the Fund also

may be required to pay a premium, which would increase the cost of the security sold. The Fund will incur transaction costs in effecting short sales. The Fund's gains and losses will be decreased or increased, as the case may be, by the amount of the premium, dividends, interest, or expenses the Fund may be required to pay in connection with a short sale.

Risks Associated with Value Investing. Value stocks, including those selected by the portfolio managers for the Fund, are subject to the risks that their intrinsic value may never be realized by the market and that their prices may go down. In addition, value style investing may fall out of favor and underperform growth or other styles of investing during given periods. The Fund's value discipline may result in a portfolio of stocks that differs materially from its benchmark index.

Securities selected by the portfolio managers using a value strategy may never reach their intrinsic value because the market fails to recognize what the portfolio managers consider to be the true business value or because the portfolio managers have misjudged those values. There may be periods during which the investment performance of the Fund suffers while using a value strategy.

Liquidity Risk. The Fund's investments in illiquid securities may reduce the returns of the Fund because it may not be able to sell the illiquid securities at an advantageous time or price.

Over-the-Counter Risk. Securities traded in OTC markets may trade in smaller volumes, and their prices may be more volatile, than securities principally traded on securities exchanges. Such securities may be less liquid than more widely traded securities. In addition, the prices of such securities may include an undisclosed dealer markup, which the Fund pays as part of the purchase price.

U.S. Government Securities Risk. Certain U.S. government securities are supported by the full faith and credit of the United States; others are supported by the right of the issuer to borrow from the U.S. Treasury; others are supported by the discretionary authority of the U.S. government to purchase the agency's obligations; and still others are supported only by the credit of the issuing agency, instrumentality, or enterprise. Although U.S. government-sponsored enterprises such as the Federal Home Loan Mortgage Corporation (Freddie Mac) and the Federal National Mortgage Association (Fannie Mae) may be chartered or sponsored by Congress, they are not funded by Congressional appropriations, and their securities are not issued by the U.S. Treasury, are not supported by the full faith and credit of the U.S. government, and involve increased credit risks in comparison to U.S. Treasury securities or other securities supported by the full faith and credit of the U.S. government.

Mortgage-Related and Asset-Backed Risk. Mortgage-related and other asset-backed securities represent interests in "pools" of mortgages or other assets such as consumer loans or receivables held in trust and often involve risks that are different from or possibly more acute than risks associated with other types of debt instruments. Mortgage-related securities are subject to prepayment risk and can be highly sensitive to changes in interest rates. Mortgage-backed securities, and in particular those not backed by a government guarantee, are subject to credit risk. The Fund's investments in other asset-backed securities are subject to risks similar to those associated with mortgage-related securities, as well as additional risks associated with the nature of the assets and the servicing of those assets.

Large Investor Risk. Ownership of shares of the Fund may be concentrated in one or a few large investors. Such investors may redeem shares in large quantities or on a frequent basis. Redemptions by a large investor may affect the performance of the Fund, may increase realized capital gains, may accelerate the realization of taxable income to shareholders and may increase transaction costs. These transactions potentially limit the use of any capital loss carryforwards and certain other losses to offset future realized capital gains (if any). Such transactions may also increase the Fund's expenses. In addition, the Fund may be delayed in investing new cash after a large shareholder purchase, and under such circumstances may be required to maintain a larger cash position than it ordinarily would.

Management Risk. The Fund is subject to management risk as an actively managed investment portfolio. The portfolio managers will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results. The portfolio managers' opinion about the intrinsic worth or creditworthiness of a company or security may be incorrect, the portfolio managers may not make timely purchases or sales of securities for the Fund, the Fund's investment objective may not be achieved, or the market may continue to undervalue the Fund's securities. In addition, the Fund may not be able to quickly dispose of certain securities holdings. Moreover, there can be no assurance that all of the Adviser's personnel will continue to be associated with the Adviser for any length of time. The loss of services of one or more key employees of the Adviser, including the portfolio managers, could have an adverse impact on the Fund's ability to achieve its investment objective. Certain securities or other instruments in which the Fund seeks to invest may not be available in the quantities desired. In such circumstances, the portfolio managers may determine to purchase other securities or instruments as substitutes. Such substitute securities or instruments may not perform as intended, which could result in losses to the Fund.

Because of these and other risks, you could lose money by investing in the Fund.

Performance Information

The bar chart and Average Annual Total Returns table below provide an indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns for 1, 5 and 10 calendar years compare with those of two broad-based securities market indexes. The chart and table reflect the reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Standard & Poor's 500 Stock Index (S&P 500) is a capitalization-weighted index which covers industrial, utility, transportation and financial service companies, and represents approximately 75% of the New York Stock Exchange (NYSE) capitalization and 30% of NYSE issuers and is considered a measure of large capitalization stock performance. The MSCI All Country World Index is a float-adjusted market capitalization index that is designed to measure the combined equity market performance of developed and emerging market countries. The 60%/40% S&P 500 Index/Bloomberg Barclays U.S. Aggregate Bond Index is a composite blend of 60% of the S&P 500 Index and 40% of the Bloomberg Barclays U.S. Aggregate Bond Index. The Consumer Price Index (CPI) is an unmanaged index representing the rate of inflation of U.S. consumer prices as

determined by the U.S. Bureau of Labor Statistics. The S&P 500, MSCI All Country World and 60%/40% S&P 500/Bloomberg Barclays U.S. Aggregate Bond indexes are included as broad-based comparisons to the capitalization characteristics of the Fund’s portfolio. The CPI is included as comparison of the Fund’s results to inflation.

To obtain updated monthly performance information, please visit the Fund’s website at www.fpafunds.com or call (800) 982-4372.

The Fund’s highest/lowest *quarterly* results during this time period were:

| | | |
|----------------|---------|----------------------------|
| Highest | 14.96% | (Quarter ended 6/30/2009) |
| Lowest | -16.09% | (Quarter ended 12/31/2008) |

| Average Annual Total Returns (for the periods ended December 31, 2016) | One Year | Five Years | Ten Years |
|---|---------------------|-----------------------|----------------------|
| Before Taxes | 10.25% | 9.15% | 6.90% |
| After Taxes on Distributions ⁽¹⁾ | 8.99% | 7.85% | 5.75% |
| After Taxes on Distributions and Sale of Fund Shares ⁽¹⁾ | 6.83% | 7.04% | 5.32% |
| S&P 500 (reflects no deductions for fees, expenses or taxes) | 11.96% | 14.66% | 6.95% |
| MSCI All Country World Index (reflects no deductions for fees, expenses or taxes) | 7.86% | 9.36% | 3.56% |
| 60%/40% S&P 500 Index/Bloomberg Barclays U.S. Aggregate Bond Index (reflects no deductions for fees, expenses or taxes) | 8.31% | 9.69% | 6.21% |
| Consumer Price Index (reflects no deductions for fees, expenses or taxes) | 2.10% | 1.35% | 1.81% |

⁽¹⁾ After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend upon an investor’s tax situation and may differ from those shown. After-tax returns presented here are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts (“IRAs”). Early withdrawal from a 401(k) account or an IRA could lead to taxation of the withdrawn amount as ordinary income and could be subject to an additional penalty.

Investment Adviser

First Pacific Advisors, LLC (“FPA” or the “Adviser”) is the Fund’s investment adviser.

Portfolio Managers

Steven Romick has been a portfolio manager of the Fund since its inception on June 2, 1993. Mark Landecker and Brian Selmo have been portfolio managers of the Fund since June 2, 2013.

Purchase and Sale of Fund Shares

Investors may purchase or redeem Fund shares on any business day by written request, check, wire, ACH (Automated Clearing House), telephone, or through dealers as further described in this prospectus. You may conduct transactions by mail (FPA Funds, c/o UMB Fund Services, Inc., P.O. Box 2175, Milwaukee, Wisconsin 53201-2175, or 235 West Galena Street, Milwaukee, Wisconsin 53212), by wire, or by telephone at (800) 638-3060. Purchases and redemptions by telephone are only permitted if you previously established this option in your account. You can use the Account Application for initial purchases.

The minimum initial investment is \$1,500, and each subsequent investment must be at least \$100. If you are eligible, you can establish an IRA (individual retirement account) and/or other retirement plan with a \$100 minimum initial investment and an expressed intention to increase the investment to \$1,500 within 12 months. No minimum is imposed for subsequent investments in these accounts. All purchases made by check should be in U.S. dollars and made payable to the FPA Funds. Third party, starter or counter checks will not be accepted. A charge may be imposed by your bank and/or the Fund if a check does not clear.

Subsequent investments and redemptions can be made directly to UMB Fund Services, Inc.

Tax Information

The Fund's distributions are taxable and will be taxed as ordinary income and/or long-term capital gain, unless you are investing through a tax-deferred arrangement, such as an IRA or 401(k) plan.

Information Regarding Transactions Through Financial Intermediaries

Shareholders may be required to pay a commission directly to their broker or other financial intermediary when buying or selling shares of the Fund. Shareholders and potential investors may wish to contact their broker or other financial intermediary for information regarding applicable commissions, transaction fees or other charges associated with transactions in shares of the Fund.

In addition, brokers, dealers, banks, trust companies and other financial representatives may receive compensation from the Fund or its service providers for providing a variety of services, which may include record keeping, transaction processing for shareholders' accounts and certain shareholder services not currently offered to shareholders that deal directly with the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's web site for more information.

Details about the Fund

INVESTMENT OBJECTIVE

The Fund seeks to generate equity-like returns over the long-term, take less risk than the market and avoid permanent impairment of capital. The Fund's Board of Trustees (the "Board") may change the Fund's investment objective without shareholder approval upon 90 days' written notice to shareholders.

PRINCIPAL INVESTMENT STRATEGIES

To pursue the Fund's investment objective, the portfolio managers invest in both equity and debt securities of companies. The portfolio managers believe that this combination of securities broadens the universe of opportunities for the Fund, offers additional diversification and helps to lower volatility. The portfolio managers invest primarily in equity securities and the balance of the Fund's portfolio in debt securities, cash and cash equivalents. The Fund has no limit on the amount of assets it may invest in non-U.S. securities. The decision to invest in a non-U.S. security will be based on the portfolio managers' fundamental security analysis. In addition, the Fund may sell securities short, and the portfolio managers may employ a short selling strategy for a portion of the Fund.

Equity securities represent an ownership interest, or the right to acquire an ownership interest, in an issuer. Different types of equity securities provide different voting and dividend rights and priority in case of the bankruptcy of the issuer. The Fund may invest in a variety of equity securities, including common stocks, preferred stocks, convertible securities, rights and warrants.

The portfolio managers look for large and small companies that it believes to have excellent future prospects that are undervalued by the securities markets. The portfolio managers believe that these opportunities often arise when companies are out-of-favor or undiscovered by most of Wall Street. The portfolio managers also search for companies that offer earnings growth, opportunity for price/earnings multiple expansion and the best combination of such quality criteria as strong market share, good management, high barriers to entry and high return on capital.

Using fundamental security analysis, the portfolio managers may look for investments that trade at a substantial discount to the portfolio managers' determination of the company's value (absolute value) rather than those that might appear inexpensive based on a discount to their peer groups or the market average (relative value). The portfolio managers attempt to determine a company's absolute value using fundamental security analysis, which they believe generally provides them with a thorough view of a company's financial and business characteristics. As a part of their process, the portfolio managers may:

- Review stock prices or industry group under-performance, insider purchases, management changes and corporate spin-offs.
- Communicate directly with company management, suppliers, and customers.

- Use their judgment to define the company's future potential, financial strength and competitive position.

The portfolio managers generally seek to sell an equity investment when they believe that the company's value has been fully reflected in a higher valuation by the market or when a negative fundamental development occurs in the company or its industry that the portfolio managers believe could significantly impact future earnings growth.

A debt security is an interest-bearing security that companies or governments use to borrow money from investors. The issuer of a debt security promises to pay interest at a stated rate, which may be variable or fixed, and to repay the amount borrowed at maturity (the date when the debt security is due and payable). The Fund may invest in debt securities issued by companies, the U.S. government and its agencies; mortgage-backed and asset-backed securities (*i.e.* securities that are backed by pools of loans or mortgages assembled for sale to investors); municipal notes and bonds; and commercial paper and certificates of deposit.

The portfolio managers invest in debt securities seeking to provide the Fund with a reliable and recurring stream of income, while seeking to preserve its capital. The Fund may also invest in debt securities rated below investment grade ("high yield bonds" or "junk bonds"). The Fund has the ability to invest up to 65% of its total assets in debt securities, although it will generally invest a greater percentage of its portfolio in equity securities than debt securities.

The portfolio managers select debt securities by using an approach that is similar to the approach they use to select equity securities and by trying to forecast current interest rate trends. The portfolio managers generally employ a defensive interest rate strategy, which means they seek to keep the average maturity of the debt-securities portion of the Fund to 10 years or less, by investing at different points along the yield curve. The portfolio managers also continually consider yield spreads and other underlying factors such as credit quality, investor perception and liquidity to determine which sectors offer the best investment value at any given time.

The portfolio managers may engage in a strategy known as selling short. Selling a security short is when the Fund sells a security it does not own. To sell a security short, the Fund must borrow the security from someone else to deliver to the buyer. The Fund then replaces the security it borrowed by purchasing it at the market price at or before the time of replacement. Until it replaces the security, the Fund repays the person that lent it the security for any interest or dividends that may have accrued during the period of the loan. The Fund typically sells securities short to take advantage of an anticipated decline in prices or to protect a profit in a security it already owns.

ADDITIONAL INFORMATION ABOUT PRINCIPAL INVESTMENT STRATEGIES

To pursue the Fund's investment objective, the portfolio managers generally invest the Fund's assets in common stocks and other securities of international and U.S. companies and debt securities, including but not limited to the following securities:

Equity Securities. Equity securities represent ownership shares in a company, and include securities that convey an interest in, may be converted into or give holders a right to purchase or otherwise acquire such ownership shares in a company.

Common Stock. Common stocks represent shares of ownership in a company. After other company obligations are satisfied, common stockholders participate in company profits on a pro-rata basis; profits may be paid out in dividends or reinvested in the company to help it grow. Increases and decreases in earnings are usually reflected in a company's stock price, so common stocks generally have the greatest appreciation and depreciation potential of all corporate securities. Ownership of common stock of a non-U.S. company may be represented by depositary receipts (which are certificates evidencing ownership of securities of a non-U.S. issuer).

Preferred Stock. Preferred stock is typically subordinated to an issuer's senior debt, but senior to the issuer's common stock. Typically, preferred stock is structured as a long-dated or perpetual bond that distributes income on a regular basis. Issuers are permitted to skip ("non-cumulative" preferred stock) or defer ("cumulative" preferred stock) distributions. Preferred stock may be convertible into common stock and may contain call or maturity extension features.

Warrants. Warrants are options to buy a stated number of shares of common stock at a specified price anytime during the life of the warrants (generally two or more years). They can be highly volatile and may have no voting rights, pay no dividends, and have no rights with respect to the assets of the entity issuing them.

Non-U.S. Securities. The Fund may invest in securities of U.S.-dollar denominated non-U.S. issuers traded in the United States and in non-U.S. currency-denominated securities of non-U.S. issuers. For purposes of this prospectus, non-U.S. issuers are generally non-U.S. governments or companies domiciled outside the United States, but the portfolio managers may make a different designation in certain circumstances. The non-U.S. issuers that the Fund may invest in include issuers with significant exposure to countries with developing economies and/or markets.

Cash Equivalents. Cash equivalents are short-dated instruments that are readily convertible into cash. They may include bank obligations, commercial paper, and repurchase agreements. Bank obligations include certificates of deposit and bankers' acceptances. Commercial paper is a short-term promissory note issued by a corporation, which may have a floating or variable rate. Repurchase agreements are transactions under which the Fund purchases a security from a dealer counterparty and agrees to resell the security on a specified future date at the same price, plus a specified interest rate.

U.S. Government Securities. The U.S. government sector includes fixed-income securities issued by the U.S. government or its agencies and instrumentalities, such as U.S. Treasury and U.S. government agency securities, mortgage pass-through securities, including Government National Mortgage Association (Ginnie Mae), Federal Home Loan Mortgage Corporation (Freddie Mac) and the Federal National Mortgage Association (Fannie Mae), and agency mortgage-backed securities.

Mortgage-Backed Securities. In addition to the U.S. government mortgage-pass through securities described above, the mortgage sector includes non-agency mortgage-backed securities, such as CMOs, commercial-mortgage backed securities, residential mortgage-backed securities and single- and multi-class pass-through securities. Mortgage-backed securities represent direct or indirect participation in mortgage loans secured by real property.

Asset-Backed Securities. Asset-backed securities are bonds issued through special purpose vehicles and backed by pools of loans, other receivables or other assets. Asset-backed securities are created from many types of assets, such as home equity loans, auto loans, student loans and credit card receivables. The credit quality of an asset-backed security depends on the quality and performance of the underlying assets and/or the level of any credit support provided by the securitization structure. The proportions of the Fund's portfolio invested in various types of asset-backed securities will depend on many factors, including the portfolio managers' appraisal of the economy, yield, credit quality, macroeconomic factors and capital appreciation potential, among others. To the extent the Fund focuses its investments in a particular type of asset-backed security, it may be more susceptible to economic conditions and risks affecting the type of asset-backed security.

Corporate Debt Securities. The Fund may invest in corporate bonds, bank debt, notes and commercial paper of varying maturities and may invest in domestic bonds, bank debt and notes and those issued by non-U.S. corporations and governments. Issuers of these securities have a contractual obligation to pay interest at a specified rate on specified date and to repay principal on a specified maturity date, and may have provisions that allow the issuer to redeem or "call" the security before its maturity.

Temporary Investments and Other Measures. The investments and strategies described in this prospectus are those that are used under normal circumstances. During unusual economic, market, political or other circumstances, or during periods of significant shareholder redemptions, the Fund may invest up to 100% of its assets in short-term, high quality debt instruments, such as U.S. government securities. These instruments would not ordinarily be consistent with the Fund's principal investment strategies, and may prevent the Fund from achieving its investment objective. The Fund will use a temporary strategy if the portfolio managers believe that pursuing the Fund's investment objective will subject the Fund to a significant risk of loss. When the portfolio managers pursue a temporary defensive strategy, the Fund may not profit from favorable developments that it would have otherwise profited from if it were pursuing its normal strategies.

As part of its normal operations, the Fund may hold cash or invest a portion of its portfolio in short-term interest bearing U.S. dollar denominated securities, pending investments or to provide for possible redemptions. Investments in such short-term debt securities can generally be sold easily and have limited risk of loss, but earn only limited returns. The Fund may increase its cash holdings and/or such short-term investments in anticipation of a greater than normal number of shareholder redemptions.

The portfolio managers' emphasis on a value-oriented investment approach could result in a portfolio that does not reflect the national economy, differs significantly from broad market indices and consists of securities considered by the average investor to be unpopular or unfamiliar.

Percentage Investment Limitations. Unless otherwise stated, all percentage limitations on Fund investments listed in this prospectus will apply at the time of purchase. The Fund would not violate these limitations unless an excess or deficiency occurs or exists immediately after and as a result of an investment.

Other Investments and Techniques. The Fund may invest in other types of securities and use a variety of investment techniques and strategies which are not principal investment strategies and are not described in this prospectus. These securities and techniques may subject the Fund to additional risks. Please see the Statement of Additional Information (the “SAI”) for additional information about the securities and investment techniques described in this prospectus and about additional securities and techniques that may be used by the Fund.

ADDITIONAL INFORMATION ABOUT PRINCIPAL RISKS

Risks Associated with Investing in Equities. Equity securities, generally common stocks, preferred stocks and/or depositary receipts, held by the Fund may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect the securities markets generally, such as adverse changes in economic or political conditions, the general outlook for corporate earnings, interest rates or investor sentiment. Sustained periods of market volatility, either globally or in any jurisdiction in which the Fund invests, may increase the risks associated with an investment in the Fund. Equity securities may also lose value because of factors affecting an entire industry or sector, such as increases in production costs or factors directly related to a specific company, such as decisions made by its management.

Common stock of an issuer in the Fund’s portfolio may decline in price if the issuer fails to make anticipated dividend payments because, among other reasons, the issuer of the security experiences a decline in its financial condition. Common stock is subordinated to preferred stocks, bonds and other debt instruments in a company’s capital structure, in terms of priority with respect to corporate income, and therefore will be subject to greater dividend risk than preferred stocks or debt instruments of such issuers. In addition, while broad market measures of common stocks have historically generated higher average returns than fixed income securities, common stocks have also experienced significantly more volatility in those returns. Because preferred stock is generally junior to debt securities and other obligations of the issuer, deterioration in the credit quality of the issuer will cause greater changes in the value of a preferred stock than in a more senior debt security with similar stated yield characteristics.

Interest Rate Risk. As with most funds that invest in debt securities, changes in interest rates are one of the most important factors that could affect the value of an investment in the Fund. Interest rate risk is the risk that debt securities will decline in value because of increases in interest rates. Rising interest rates tend to cause the prices of debt securities (especially those with longer maturities) and the Fund’s share price to fall. Generally, bonds with longer maturities have a greater duration and thus are subject to greater price volatility from changes in interest rates. Adjustable rate instruments also react to interest rate changes in a similar manner although generally to a lesser degree (depending, however, on the characteristics of the reset terms, including the index chosen, frequency of reset and reset caps or floors, among other things). Low interest rates may pose heightened risks with respect to investments in fixed income securities. If interest rates were to rise from a low level, fixed income securities markets may experience lower prices, increased volatility and lower liquidity. The negative impact on fixed income securities from rate increases, regardless of the cause, could be swift and significant, which could result in significant losses by the Fund, even if such rate increases are anticipated by the portfolio managers.

ARM Risk. During periods of extreme fluctuations in interest rates, the resulting fluctuations of ARM rates could affect the ARMs' market value. Most ARMs generally have annual reset limits or "caps". Fluctuations in interest rates above these levels, thus, could cause the mortgage-backed securities to "cap out" and to behave more like long-term, fixed-rate debt securities. During periods of declining interest rates, of course, the coupon rates may readjust downward and result in lower yields. Because of this feature, the value of ARMs will likely not rise during periods of declining interest rates to the same extent as fixed-rate instruments.

Credit Risk. Credit risk refers to the likelihood that an issuer will default on the payment of principal and/or interest on a security. Various factors could affect the issuer's actual or perceived willingness or ability to make timely interest or principal payments, including changes in the issuer's financial condition or in general economic conditions. In addition, lack of or inadequacy of collateral or credit enhancements for a fixed income security may affect its credit risk. Below investment grade securities predominantly have more risk with respect to the issuer's ability to pay interest and repay principal when due, and therefore involve a greater risk of default or nonpayment. Credit risk of a security may change over time, and securities which are rated by ratings agencies are often reviewed and may be subject to downgrade. However, ratings are only opinions of the agencies issuing them and are not absolute guarantees as to quality.

Call Risk. Issuers of callable bonds are permitted to redeem these bonds before their final maturity. Issuers may call outstanding securities before maturity for a number of reasons, including decreases in prevailing interest rates or improvements to the issuer's credit profile. If an issuer calls a security in which the Fund is invested, the Fund could lose potential price appreciation and be forced to reinvest the proceeds in securities that bear a lower interest rate or more credit risk.

Market Risk. The market price of investments owned by the Fund may go up or down, sometimes rapidly or unpredictably. Fund investments may decline in value due to factors affecting the overall markets, or particular industries or sectors. The value of a holding may decline due to general market conditions that are not specifically related to a particular issuer, such as real or perceived adverse economic conditions, changes in the general outlook for an issuer's financial condition, changes in interest or currency rates, domestic or international monetary policy or adverse investor sentiment generally. The value of a holding may also decline due to factors that affect a particular industry or industries, such as competitive conditions within an industry or government regulations. The Fund may experience heavy redemptions, which could cause the Fund to liquidate its assets at inopportune times or at a loss or depressed value, which could cause the value of an investment in the Fund to unexpectedly decline. Shareholder redemptions may also cause the Fund to engage in "odd-lot" fixed income transactions, which due to their small size, may result in the Fund receiving substantially lower value in such transactions than if the Fund had engaged in a large block trade of such securities. In addition, the Fund may rely on various third-party sources to calculate its net asset value. Errors or systems failures and other technological issues may adversely impact the Fund's calculation of its net asset value, and such net asset value calculation issues may result in inaccurately calculated net asset values, delays in net asset value calculation and/or the inability to calculate net asset values over extended periods. The Fund may be unable to recover any losses associated with such failures.

Risks Associated with Investing in Smaller-Cap and Mid-Cap Companies. The prices of securities of smaller-cap and mid-cap companies tend to fluctuate more widely than those of larger, more established companies. Smaller-cap and mid-cap companies may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or market averages in general. In addition, these companies often have shorter operating histories and are more reliant on key products or personnel than larger companies. The securities of smaller- or medium-sized companies are often traded over-the-counter, and may not be traded in volumes typical of securities traded on a national securities exchange. Securities of such issuers may lack sufficient market liquidity to effect sales at an advantageous time or without a substantial drop in price.

Risks Associated with Investing in Non U.S. Securities. Non-U.S. investments involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. Certain of the risks noted below may also apply to securities of U.S. issuers with significant non-U.S. operations. Investments in non-U.S. securities involve the following risks:

- The economies of some non-U.S. markets often do not compare favorably with that of the U.S. in areas such as growth of gross domestic product, reinvestment of capital, resources, and balance of payments. Some of these economies may rely heavily on particular industries or non-U.S. capital. They may be more vulnerable to adverse diplomatic developments, the imposition of economic sanctions against a country, changes in international trading patterns, trade barriers and other protectionist or retaliatory measures.
- Governmental actions—such as the imposition of capital controls, nationalization of companies or industries, expropriation of assets or the imposition of punitive taxes—may adversely affect investments in non-U.S. markets. Such governments may also participate to a significant degree, through ownership or regulation, in their respective economies.
- The governments of certain countries may prohibit or substantially restrict non-U.S. investing in their capital markets or in certain industries. This could severely affect security prices. This could also impair the Fund’s ability to purchase or sell non-U.S. securities or transfer its assets or income back to the U.S. or otherwise adversely affect the Fund’s operations.
- Other non-U.S. market risks include foreign exchange controls, difficulties in pricing securities, defaults on non-U.S. government securities, difficulties in enforcing favorable legal judgments in non-U.S. courts, and political and social instability. Legal remedies available to investors in some non-U.S. countries are less extensive than those available to investors in the U.S. Many non-U.S. governments supervise and regulate stock exchanges, brokers and the sale of securities less than the U.S. government does. Corporate governance may not be as robust as in more developed countries. As a result, protections for minority investors may not be strong, which could adversely affect the Fund’s non-U.S. holdings or exposures.

- Accounting standards in other countries are not necessarily the same as in the U.S. If the accounting standards in another country do not require as much disclosure or detail as U.S. accounting standards, it may be harder for the portfolio managers to completely and accurately determine a company's financial condition or otherwise assess a company's creditworthiness.
- Because there are usually fewer investors on non-U.S. exchanges and smaller numbers of shares traded each day, it may be difficult for the Fund to buy and sell securities on those exchanges. In addition, prices of non-U.S. securities may be more volatile than prices of securities traded in the U.S.
- Non-U.S. markets may have different clearance and settlement procedures. In certain markets, settlements may not keep pace with the volume of securities transactions. If this occurs, settlement may be delayed, and the Fund's assets may be uninvested and may not be earning returns. The Fund also may miss investment opportunities or not be able to sell an investment or reduce its exposure because of these delays.
- Changes in currency exchange rates will affect the value of the Fund's non-U.S. holdings or exposures.
- The costs of non-U.S. securities transactions tend to be higher than those of U.S. transactions, increasing the transaction costs paid directly or indirectly by the Fund.
- International trade barriers or economic sanctions against non-U.S. countries may adversely affect the Fund's non-U.S. holdings or exposures.
- Global economies are increasingly interconnected, which increases the possibilities that conditions in one country or region might adversely impact a different country or region. The severity or duration of these conditions may be affected if one or more countries leave the euro currency or if other policy changes are made by governments or quasi-governmental organizations.

The Fund may invest in depository receipts, including American Depositary Receipts ("ADRs"), European Depositary Receipts ("EDRs"), Global Depositary Receipts ("GDRs") and Global Depositary Notes ("GDNs"), which are certificates evidencing ownership of securities of a non-U.S. issuer. Depository receipts may be sponsored by the non-U.S. issuer or unsponsored. Depository receipts are subject to the risks of changes in currency or exchange rates and the risks of investing in non-U.S. securities that they evidence or into which they may be converted. The issuers of unsponsored depository receipts are not obligated to disclose information that would be considered material in the U.S., or to pass through to shareholders any voting rights with respect to the deposited securities. Therefore, there may be less information available regarding these issuers, and there may not be a correlation between such information and the market value of the depository receipts.

Risks Associated with Investing in Emerging Markets. In investing the Fund's assets, the portfolio managers focus on countries with established rules of law and political systems that allow for transparent and unbiased enforcement of those laws, although there can be no assurance that

the Fund's assets will in all cases be invested in countries that offer such protections, and such investments may be subject to heightened risk. The Fund's investments in non-U.S. issuers in developing or emerging market countries may involve increased exposure to changes in economic, social and political factors as compared to investments in more developed countries. The economies of most emerging market countries are in the early stage of capital market development and may be dependent on relatively fewer industries. As a result, their economic systems are still evolving. Their legal and political systems may also be less stable than those in developed economies. Securities markets in these countries can also be smaller, and there may be increased settlement risks. Emerging market countries often suffer from currency devaluation and higher rates of inflation. Due to these risks, securities issued in developing or emerging countries may be more volatile, less liquid, and harder to value than securities issued in more developed countries.

Risks Associated with Short Selling. The Fund can lose money if the price of the security it sold short increases between the date of the short sale and the date on which the Fund replaces the borrowed security. These losses are theoretically unlimited. To borrow the security, the Fund also may be required to pay a premium, which would increase the cost of the security sold. The Fund will incur transaction costs in effecting short sales. The Fund's gains and losses will be decreased or increased, as the case may be, by the amount of the premium, dividends, interest, or expenses the Fund may be required to pay in connection with a short sale.

Risks Associated with Value Investing. Value stocks, including those selected by the portfolio managers for the Fund, are subject to the risks that their intrinsic value may never be realized by the market and that their prices may go down. In addition, value style investing may fall out of favor and underperform growth or other styles of investing during given periods. The Fund's value discipline may result in a portfolio of stocks that differs materially from its benchmark index.

Securities selected by the portfolio managers using a value strategy may never reach their intrinsic value because the market fails to recognize what the portfolio managers consider to be the true business value or because the portfolio managers have misjudged those values. There may be periods during which the investment performance of the Fund suffers while using a value strategy.

Liquidity Risk. The Fund's investments in illiquid securities may reduce the returns of the Fund because it may not be able to sell the illiquid securities at an advantageous time or price. Investments in high yield securities, non-U.S. securities, derivatives or other securities with substantial market and/or credit risk tend to have the greatest exposure to liquidity risk. Certain investments in private placements and Rule 144A securities may be considered illiquid investments. Lower-rated debt securities tend to be less liquid than higher-rated securities. Illiquid securities may trade at a discount from comparable, more liquid investments, and may be subject to wider fluctuations in market value. Furthermore, reduced number and capacity of dealers and other counterparties to "make markets" in fixed income securities, in connection with the growth of the fixed income markets, may increase liquidity risk with respect to the Fund's investments in fixed income securities. When there is no willing buyer and investments cannot be readily sold, the Fund may have to lower the selling price, sell other investments, or may not be able to sell the securities at all and may have to forego another, more appealing investment opportunity, any of which could have a negative effect on the Fund's performance. These securities may also be difficult to value and their values may be more volatile because of liquidity risk. Increased Fund redemption activity may negatively impact

Fund performance and increase liquidity risk due to the need of the Fund to sell portfolio securities. Regulatory changes may further constrain the ability of market participants to create liquidity, particularly in times of increased market volatility.

Over-the-Counter Risk. Securities traded in OTC markets may trade in smaller volumes, and their prices may be more volatile, than securities principally traded on securities exchanges. Such securities may be less liquid than more widely traded securities. In addition, the prices of such securities may include an undisclosed dealer markup, which the Fund pays as part of the purchase price.

U.S. Government Securities Risk. Certain U.S. government securities are supported by the full faith and credit of the United States; others are supported by the right of the issuer to borrow from the U.S. Treasury; others are supported by the discretionary authority of the U.S. government to purchase the agency's obligations; and still others are supported only by the credit of the issuing agency, instrumentality, or enterprise. Although U.S. government-sponsored enterprises such as the Federal Home Loan Mortgage Corporation (Freddie Mac) and the Federal National Mortgage Association (Fannie Mae) may be chartered or sponsored by Congress, they are not funded by Congressional appropriations, and their securities are not issued by the U.S. Treasury, are not supported by the full faith and credit of the U.S. government, and involve increased credit risks in comparison to U.S. Treasury securities or other securities supported by the full faith and credit of the U.S. government. Any security guaranteed by the U.S. government or its agencies or instrumentalities, or a security backed by the U.S. Treasury or the full faith and credit of the United States, is guaranteed or backed only as to the timely payment of interest and principal when held to maturity, but the market values for such securities are not guaranteed and will fluctuate.

Any market movements, regulatory changes or changes in political or economic conditions that affect the U.S. government agencies or instrumentalities in which the Fund invests may have a significant impact on the Fund's performance. Events that would adversely affect the market prices of securities issued or guaranteed by one government agency or instrumentality may adversely affect the market price of securities issued or guaranteed by other government agencies or instrumentalities. Because many types of U.S. government securities trade actively outside the United States, their prices may rise and fall as changes in global economic conditions affect the demand for these securities.

Mortgage-Related and Asset-Backed Risk. Mortgage-related and other asset-backed securities represent interests in "pools" of mortgages or other assets such as consumer loans or receivables held in trust and often involve risks that are different from or possibly more acute than risks associated with other types of debt instruments. Mortgage-related securities are subject to prepayment risk and, thus, can be highly sensitive to changes in interest rates. Generally, in a period of rising interest rates, individual borrowers are less likely to exercise prepayment options which tend to extend the expected maturity of mortgage-related securities, making them more sensitive to changes in interest rates. As a result, if the Fund holds mortgage-related securities, rising interest rates may cause the Fund to exhibit additional volatility due to the increased expected average life of its mortgage-related holdings. When interest rates decline, borrowers may pay their mortgages sooner than expected. These prepayments can reduce the returns of the Fund because the Fund may realize losses on securities that were acquired at a premium to par and the Fund may have to reinvest

the proceeds from prepayments at the lower prevailing interest rates which can reduce the Fund's yield.

Mortgage-related securities may be either pass-through securities or collateralized mortgage obligations ("CMOs"). Pass-through securities represent a right to receive principal and interest payments collected on a pool of mortgages which are passed through to security holders. CMOs are created by dividing the principal and interest payments collected on a pool of mortgages into several cash flow streams ("tranches") with different priority rights to portions of the underlying mortgage payments. Certain CMO tranches may represent a right to receive specific sources of cash flow such as interest-only ("IOs") or principal-only ("POs"). These securities are frequently referred to as "stripped securities" and may be extremely sensitive to changes in interest rates. Stripped securities can produce higher yields than more traditional securities. However, stripped mortgage securities are highly sensitive to changes in interest and prepayment rates. As a result, such securities are extremely volatile. For example, generally, the value of principal-only stripped mortgage-related securities fall as interest rates rise, whereas the value of interest-only stripped mortgage-related securities rise as interest rates rise, and vice versa. If the Fund invests in CMO tranches (including CMO tranches issued by government agencies) and interest rates move in a manner not anticipated by the managers, it is possible that the Fund could lose all or substantially all of its investment. The market prices of CMOs structured as accrual certificates (also known as "Z-Bonds") are affected to a greater extent by interest rate changes and therefore tend to be more volatile than securities which pay current interest in cash. Mortgage-related securities, and in particular those not backed by a government guarantee, are subject to credit risk.

The Fund's investments in other asset-backed securities are subject to risks similar to those associated with mortgage-related securities, as well as additional risks associated with the nature of the assets and the servicing of those assets. Payment of principal and interest on asset-backed securities may be largely dependent upon the cash flows generated by the assets backing the securities, and asset-backed securities may not have the benefit of any security interest in the related assets. Certain asset-backed securities, including securities backed by auto loans, are subject to subprime lending and loan-to-value risk. One of the most significant risks to a holder of an auto loan asset-backed security is the fluctuation of the value of the loans acquired. The higher the loan-to-value ratio, the riskier the loan is for a lender. Further, subprime loans underlying auto loan asset-backed securities may have higher default rates than loans that meet more stringent underwriting requirements.

Risks Associated with Investing in High Yield Securities. High yield bonds, which are sometimes called "junk" bonds, are highly speculative securities that are usually issued by smaller, less credit-worthy and/or highly leveraged (indebted) companies. Because investment in lower-rated or unrated securities involves greater investment risk, achievement of the Fund's investment objective is more dependent on the portfolio managers' credit analysis than with respect to the Fund's investments in higher-rated securities. The portfolio managers do not employ a rating valuation for unrated securities. Decisions to purchase and sell these securities are based on the portfolio manager's evaluation of their investment potential and not on the ratings assigned by credit agencies. Compared with investment-grade bonds, high yield bonds carry a greater degree of risk and are less likely to make payments of interest and principal. Compared to investment-grade debt securities, market developments and the financial and business conditions of the corporation issuing high yield

securities influence high yield securities price and liquidity more than changes in interest rates when compared to investment grade debt securities. Lower-rated securities may be more susceptible to real or perceived adverse economic and competitive industry conditions than investment grade securities. A projection of an economic downturn, for example, could cause a decline in the prices of lower-rated securities because the advent of a recession could lessen the ability of a highly leveraged company to make principal and interest payments on its debt securities. New laws and proposed new laws could negatively impact the market for high-yield bonds. Insufficient liquidity in the high yield bond market may make it more difficult to dispose of high yield bonds and may cause the Fund to experience sudden and substantial price declines. A lack of reliable, objective data or market quotations may make it more difficult to value high yield bonds accurately. There is no limit on the ratings of high yield securities that may be purchased or held by the Fund, and the Fund may invest in securities that are in default.

Sovereign and Government-Related Debt. Sovereign debt includes securities issued or guaranteed by a non-U.S. sovereign government or its agencies, authorities, or political subdivisions. Government-related debt includes securities issued by non-U.S. regional or local governmental entities or government-controlled entities. In the event an issuer of sovereign debt or government-related debt is unable or unwilling to make scheduled payments of interest or principal, holders may be asked to participate in a restructuring of the debt and to extend further credit to the issuer.

Risks Associated with Investing in Convertible Securities. A convertible security is a bond, debenture, or note that may be exchanged for particular common stocks in the future at a predetermined price or formula within a specified period of time. A convertible security entitles the holder to receive interest paid or accrued on the debt security until the convertible security matures or is redeemed. Prior to redemption, convertible securities provide benefits similar to nonconvertible debt securities in that they generally provide income with higher yields than those of similar common stocks. Convertible securities may entail less risk than the corporation's common stocks. Convertible securities are generally not investment grade. The risks of nonpayment of the principal and interest increase when debt securities are rated lower than investment grade or are not rated.

Risks Associated with Investing in Repurchase Agreements. A repurchase agreement is a short-term investment. The Fund acquires a debt security that the seller agrees to repurchase at a future time and set price. If the seller declares bankruptcy or defaults, the Fund may incur delays and expenses liquidating the security. The security may also decline in value or fail to provide income.

Large Investor Risk. Ownership of shares of the Fund may be concentrated in one or a few large investors. Such investors may redeem shares in large quantities or on a frequent basis. Redemptions by a large investor may affect the performance of the Fund, may increase realized capital gains, may accelerate the realization of taxable income to shareholders and may increase transaction costs. These transactions potentially limit the use of any capital loss carryforwards and certain other losses to offset future realized capital gains (if any). Such transactions may also increase the Fund's expenses. In addition, the Fund may be delayed in investing new cash after a large shareholder purchase, and under such circumstances may be required to maintain a larger cash position than it ordinarily would.

Management Risk. The Fund is subject to management risk as an actively managed investment portfolio. The portfolio managers will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results. The portfolio managers' opinion about the intrinsic worth or creditworthiness of a company or security may be incorrect, the portfolio managers may not make timely purchases or sales of securities for the Fund, the Fund's investment objective may not be achieved, or the market may continue to undervalue the Fund's securities. In addition, the Fund may not be able to quickly dispose of certain securities holdings. Moreover, there can be no assurance that all of the Adviser's personnel will continue to be associated with the Adviser for any length of time. The loss of services of one or more key employees of the Adviser, including the portfolio managers, could have an adverse impact on the Fund's ability to achieve its investment objective. Certain securities or other instruments in which the Fund seeks to invest may not be available in the quantities desired. In such circumstances, the portfolio managers may determine to purchase other securities or instruments as substitutes. Such substitute securities or instruments may not perform as intended, which could result in losses to the Fund.

INFORMATION ABOUT NON-PRINCIPAL INVESTMENT STRATEGIES

As a secondary matter, the Fund may invest in a wide range of other investments, including futures and derivatives. The Fund may also employ investment practices that are not principal investment strategies and that this prospectus does not describe, such as repurchase agreements, when-issued and forward commitment transactions, lending of securities, borrowing and other techniques. For more information concerning the Fund's investment practices and its risks, see the SAI.

Derivatives. The Fund may invest in derivatives, a category of investments that includes forward foreign currency exchange contracts, futures, options and swaps to protect its investments against changes resulting from market conditions or currency changes (a practice called "hedging"), to reduce transaction costs or to manage cash flows. Forward foreign currency exchange contracts, futures and options are called derivatives because their value is derived from an underlying asset or economic factor. Derivatives are often more volatile than other investments and may magnify the Fund's gains or losses. There are various factors that affect the Fund's ability to achieve its objectives with derivatives. Successful use of a derivative depends on the degree to which prices of the underlying assets correlate with price movements in the derivatives the Fund buys or sells. The Fund could be negatively affected if the change in market value of its securities fails to correlate perfectly with the values of the derivatives it purchased or sold. In addition, derivatives can be volatile and involve significant risks, including counterparty risk (the risk that the other party to a contract defaults or refuses to honor the obligation), leverage risk (the risk that some derivatives entail embedded leverage magnifying losses) and liquidity risk (the risk that the derivative will be difficult to sell or close out at a favorable time or price). Changes in regulations relating to a mutual fund's use of derivatives and related instruments could potentially limit or impact the Fund's ability to invest in derivatives and adversely affect the value or performance of derivatives and the Fund.

Portfolio Holdings Disclosure

A description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI. For instructions on how to obtain an SAI, please refer to the back cover of this prospectus.

Management of the Fund

Investment Adviser

First Pacific Advisors, LLC is the Fund's investment adviser. Together with its predecessor organizations, the Adviser has been in the investment advisory business since 1954 and has served as the Fund's investment adviser since March 1, 1996. The Adviser manages assets of approximately \$30 billion and serves as the investment adviser for seven investment companies, including one closed-end investment company, and more than 40 institutional and sub-advised accounts. The Adviser is headquartered at 11601 Wilshire Boulevard, Suite 1200, Los Angeles, California 90025. The portfolio managers, who are affiliated with the Adviser, select investments for the Fund.

The total contractual management fee rate for the Fund, as a percentage of average daily net assets, for the previous fiscal year was 1.00%.

A discussion regarding the basis for the Board's approval of the investment advisory agreement is available in the Fund's annual report dated December 31, 2016.

Portfolio Managers

Steven Romick, Mark Landecker and Brian Selmo are primarily responsible for the day-to-day management of the Fund's portfolio. Mr. Romick has been a Portfolio Manager of the Fund since the Fund's inception on June 2, 1993. He has also been a Trustee of the Fund since 2002 and a Managing Partner of the Adviser since January 2010.

Mark Landecker has been a Portfolio Manager of the Fund since June 2, 2013. Mr. Landecker is currently a Partner of the Adviser since December 2013. Mr. Landecker was a Managing Director from January 2013-December 2013 and a Vice President from 2009-2012 of the Adviser.

Brian Selmo has been a Portfolio Manager since June 2, 2013. Mr. Selmo is currently a Partner of the Adviser since December 2013. Mr. Selmo was a Managing Director from January 2013 to December 2013 and a Vice President from 2008 to 2012 of the Adviser.

The SAI provides additional information about the portfolio managers' compensation, other accounts managed by the portfolio managers, and the portfolio managers' ownership of shares of the Fund.

PURCHASE AND INVESTMENT MINIMUMS

You can purchase shares by contacting any investment dealer authorized to sell the Fund's shares. You can obtain the Account Application for initial purchases. The minimum initial investment is \$1,500, and each subsequent investment, which can be made directly to UMB Fund Services, Inc., must be at least \$100 (however, as described herein, no minimum investment amount is imposed for subsequent investments in retirement plans). All purchases made by check should be in U.S. dollars and made payable to the FPA Funds. Third party, starter or counter checks will not be accepted. A charge may be imposed if a check does not clear.

SHARE PRICE

Net Asset Value. The Fund calculates its share price, also called net asset value, as of the close of trading on the New York Stock Exchange ("NYSE"), every day the NYSE is open, normally 4:00 p.m. Eastern time. The NYSE is closed not only on weekends but also on customary holidays, which currently are New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. Non-U.S. securities owned by the Fund may trade on weekends or other days when the Fund does not price its shares. As a result, the Fund's net asset value may change on days when you will not be able to purchase or redeem the Fund's shares. The share price is rounded to the nearest cent per share and equals the market value of all portfolio securities plus other assets, less all liabilities, divided by the number of Fund shares outstanding. Orders received by dealers before the NYSE closes on any business day are priced based on the share price for that day. Orders received by UMB Fund Services, Inc. at the Fund's P.O. Box address are priced based upon the Fund's share price at the close of trading on the day received at the P.O. Box.

The Fund uses various methods and inputs to establish the value of its investments, other assets and liabilities. Use of particular methods and inputs may vary over time based on availability and relevance as market and economic conditions evolve. Equity securities are generally valued each day at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are principally traded, as of the close of business on that day. If there have been no sales that day, equity securities are generally valued at the last available bid price. Securities that are unlisted and fixed income and convertible securities listed on a national securities exchange for which the over-the-counter market more accurately reflects the securities' value in the judgment of the Fund's officers are valued at the most recent bid price. However, most fixed income securities are generally valued at prices obtained from pricing vendors. Vendors value such securities based on one or more of the following inputs: transactions, bids, offers quotations from dealers and trading systems, spreads and other relationships observed in the markets among comparable securities, benchmarks, underlying equity of the issuer, and proprietary pricing models such as cash flows, financial or collateral performance and other reference data (includes prepayments, defaults, collateral, credit enhancements, and interest rate volatility). Securities that are unlisted and fixed-income and convertible securities listed on a national securities exchange for which the over-the-counter market more accurately reflects the securities' value in the judgment of the Fund's

officers, are valued at the most recent bid price. Short-term corporate notes with maturities of 60 days or less are valued at amortized cost.

Securities for which representative market quotations are not readily available or are considered unreliable by the Adviser are valued as determined in good faith under fair valuation procedures adopted by authority of the Board. For example, if trading in a security has been halted, suspended or otherwise materially restricted; a security has been de-listed from a national exchange; a security has not been traded for an extended period of time; there is other data that may call into question the reliability of market quotations; or if events occur between the close of markets outside the United States and the close of regular trading on the NYSE that, in the opinion of the Adviser, materially affect the value of any of the Fund's securities that trade principally in those international markets, those securities will be valued in accordance with such fair value procedures. Various inputs may be reviewed in order to make a good faith determination of a security's value. These inputs include, but are not limited to, the type and cost of the security; contractual or legal restrictions on resale of the security; financial statements of the issuer; size of the holding; contractual or legal restrictions on resale of the security; relevant financial or business developments of the issuer; actively traded similar or related securities; conversion or exchange rights on the security; related corporate actions; significant events occurring after the close of trading in the security; changes in overall market conditions; reports prepared by internal or external analysts, third party pricing consultants and/or industry experts; and other factors that the Fund's valuation committee reasonably believes to be relevant under the circumstances. Special valuation considerations may apply with respect to "odd-lot" fixed-income transactions, which due to their small size, may receive evaluated prices by pricing services that reflect a large block trade and not what actually could be obtained for the odd-lot position. Fair valuations and valuations of investments that are not actively trading involve judgment and may differ materially from valuations of investments that would have been used had greater market activity occurred. Use of fair valuation procedures is intended to result in more appropriate net asset values. In addition, such use is intended to reduce potential arbitrage opportunities otherwise available to short-term investors.

Additional fair value procedures are followed to address issues related to Fund holdings outside the United States. Non-U.S. securities held by the Fund trade in markets that open and close at different times, reflecting time zone differences. If significant events occur after the close of a market (and before the Fund's net asset value is next determined) which affect the value of these portfolio securities, appropriate adjustments from closing market prices may be made to reflect these events. Events of this type could include, for example, significant price changes in other markets.

Orders received by authorized dealers, certain retirement plans and certain other financial intermediaries before the NYSE closes, if communicated to UMB Fund Services, Inc. by later deadlines on the following business day, are priced at the share price for the prior business day. The share price for sales (redemptions) of Fund shares is the first share price determined after UMB Fund Services, Inc. receives a properly completed request, except that sale orders received by an authorized dealer, certain retirement plans and certain other financial intermediaries before the NYSE closes are priced at the closing price for that day if communicated to UMB Fund Services, Inc. within the times specified by the Fund. No other action is required by the shareholder who places an order with a financial intermediary.

How to Buy Fund Shares

Investors may purchase Fund shares on any business day by written request, check, wire, ACH (Automated Clearing House), telephone, or through dealers as further described in this prospectus. You may conduct transactions by mail (FPA Funds, c/o UMB Fund Services, Inc., P.O. Box 2175, Milwaukee, Wisconsin 53201-2175, or 235 West Galena Street, Milwaukee, Wisconsin 53212), by wire, or by telephone at (800) 638-3060. Purchases and redemptions by telephone are only permitted if you previously established this option in your account. You can use the Account Application for initial purchases.

The minimum initial investment is \$1,500, and each subsequent investment must be at least \$100. If you are eligible, you can establish an IRA and/or other retirement plan with a \$100 minimum initial investment and an expressed intention to increase the investment to \$1,500 within 12 months. No minimum is imposed for subsequent investments in these accounts. All purchases made by check should be in U.S. dollars and made payable to the FPA Funds. Third party, starter or counter checks will not be accepted. A charge may be imposed if a check does not clear.

Subsequent investments can be made directly to UMB Fund Services, Inc.

How to Redeem Your Shares

Redeeming (Selling) Your Shares—Redemption Payments May Be Made By Check, Wire or ACH. You can redeem (sell) for cash without charge (except a 2% redemption fee, if applicable, as described below) any or all of your Fund shares at any time by sending a written request to UMB Fund Services, Inc. Faxes are not acceptable. You can also place redemption requests through dealers, but they may charge a fee. If you are selling Fund shares from a retirement plan, you should consult the plan documentation concerning federal tax consequences and consult your plan custodian about applicable procedures for selling Fund shares.

A check will be mailed to you within seven days after UMB Fund Services, Inc. receives a properly completed request (as described below under “Written Requests”). If you purchase shares by check and request a redemption before the check has cleared, the Fund may postpone payment of your redemption proceeds up to 15 days while the Fund waits for the check to clear.

The right of redemption can be suspended and the payment therefore may be postponed for more than seven days during any period when: (a) the NYSE is closed for other than customary weekends or holidays; (b) trading on the NYSE is restricted; (c) an emergency exists as a result of which disposal by the Fund of securities it owns is not reasonably practicable or it is not reasonably practicable for the Fund to fairly determine the value of its net assets; or (d) the Securities and Exchange Commission, by order, so permits.

2% Redemption Fee. The Fund will deduct a 2% redemption fee from the redemption proceeds of any shareholder redeeming shares of the Fund held for less than 90 days. In determining how long shares of the Fund have been held, the Fund assumes that shares held by the investor the longest period of time will be sold first.

The ability of the Fund to assess the redemption fee on the underlying shareholders of omnibus accounts maintained by brokers, retirement plan accounts and approved fee-based program accounts is severely limited in those instances in which the broker, retirement plan administrator or fee-based program sponsor maintains the underlying shareholder account and may be further limited by their systems limitations. Further, the Fund may not apply the redemption fee to certain types of redemptions that officers of the Fund believe are not part of a pattern of frequent trading to profit from short-term securities market fluctuations, such as: redemptions of shares through automatic rebalancing programs or systematic withdrawal plans; redemptions requested for hardships such as the death or disability of the shareholder (or, if a trust, its beneficiary); redemptions for certain retirement plan transactions such as closing de minimis accounts, loans, plan fees, required minimum distributions, return of excess contributions, QDRO (qualified domestic relations order), automatic payroll contributions, and withdrawals at termination; redemptions requested for a QDIA (qualified default investment alternative) or redemptions initiated by the Fund. The 2% redemption fee does not apply to shares acquired through reinvested dividends or capital gain distributions. The 2% redemption fee is applied to the lesser of the purchase or redemption price if the redemption reduces the account to less than the original investment. The redemption fee is withheld from the redemption proceeds and paid to the Fund in order to defray the costs associated with such redemption. The 2% redemption fee may be waived for other reasons, as discussed in more detail in the SAI.

Written Requests. Requests must be signed by the registered shareholder(s). A signature guarantee is required if the redemption is:

- Made payable to someone other than the registered shareholder or to somewhere other than the registered address; or
- By a shareholder that is a corporation, partnership, trust or fiduciary.

A signature guarantee must be a Stamp 2000 Medallion Signature Guarantee and can be obtained from a bank or trust company; a broker or dealer; a credit union; a national securities exchange, registered securities association or clearing agency; or a savings and loan association. Additional documents such as articles of incorporation, business licenses, partnership agreements or trust documents may be required for sales by corporations, partnerships, trusts, fiduciaries, executors or administrators.

Telephone Transactions. You must elect the option on the Account Application to have the right to sell your shares by telephone. If you wish to make an election to have the right to sell your shares via telephone or to change such an election after opening an account, you will need to complete an Account Privileges Change Form with a signature guarantee. Sales via telephone are not available for shares in certificate form.

If you have elected the option to sell your Fund shares by telephone, you may direct that a check for the proceeds payable to the shareholder of record be mailed to the address of record or you may designate a bank account to receive the proceeds of such redemptions. There is a \$3.50 charge per wire. No telephone redemptions to the address of record will be processed within 30 days of a change in the address of record.

UMB Fund Services, Inc. uses procedures it considers reasonable to confirm redemption instructions via telephone, including requiring account registration verification from the caller and recording telephone instructions. Neither UMB Fund Services, Inc. nor the Fund is liable for losses due to unauthorized or fraudulent instructions if there is a reasonable belief in the authenticity of received instructions and reasonable procedures are employed. During periods of significant economic or market changes, it may be difficult to sell your shares by telephone.

The Fund can change or discontinue telephone redemption privileges without notice.

Automatic Redemption (Sale) of Your Shares. If as a result of a redemption, your account value falls below \$500, the Fund can direct UMB Fund Services, Inc. to redeem your remaining Fund shares. In such case, you will be notified in writing that your account value is insufficient and be given up to 60 days to increase it to \$500.

Escheatment. If your account is deemed “abandoned” or “unclaimed” under state law, the Fund may be required to “escheat” or transfer the assets in your account to the applicable state’s unclaimed property administration. The state may sell escheated Fund shares and, if you subsequently seek to reclaim your proceeds of liquidation from the state, you may only be able to recover the amount received when the shares were sold. It is your responsibility to ensure that you maintain a correct address for your account, keep your account active, and promptly cash all checks for dividends, capital gains and redemptions. Neither the Fund, the Fund’s transfer agent, the Fund’s distributor nor the Adviser or its affiliates will be liable to shareholders or their representatives for good faith compliance with state escheatment laws.

Excessive Trading and Market Timing. The Fund is not intended as a vehicle for frequent trading and/or market timing in an attempt to profit from short-term fluctuations in the securities markets and does not accommodate frequent trading. The Board has adopted policies and procedures designed to deter or prevent frequent purchases and redemptions. Such trading could interfere with the efficient management of the Fund’s portfolio, increase brokerage and administrative costs and dilute the value of Fund shares held by long-term investors. The 2% redemption fee is intended to serve as a deterrent to frequent trading on shares held less than 90 days. The preceding section titled “2% Redemption Fee” provides a description of how this redemption fee is applied. In addition, exchanges between this Fund and the other FPA Funds are limited to no more than four exchanges during any calendar year (see the section titled “How to Exchange Your Shares”). Irrespective of these redemption fee charges and exchange limits, the Fund reserves the right to reject any purchase request (including in connection with an exchange) if management determines in its discretion that the request may be part of a pattern of excessive trading that could adversely affect the Fund. Notifications will be made in writing by the Fund within five days. There can be no assurance that the Fund will successfully detect or prevent market timing.

How to Exchange Your Shares

You can add to an existing FPA Fund account or start a new FPA Fund account by exchanging your shares of the Fund for shares of other FPA Funds, namely FPA Capital Fund, Inc., FPA International Value Fund, FPA New Income, Inc., FPA Paramount Fund, Inc. and FPA U.S. Value Fund, Inc. The

availability of shares of FPA Capital Fund, Inc. to new investors is limited, as described in the FPA Capital Fund, Inc. prospectus.

The Fund can change or discontinue the right to exchange Fund shares into other FPA Funds upon 60 days' notice to shareholders. In the case of an exchange of shares subject to a 2% redemption fee within 90 days of purchase, the shares acquired by exchange also are subject to a 2% redemption fee if redeemed (except by exchange) within 90 days of the exchange (not the initial purchase).

You can exercise your exchange privileges either by written instructions or telephone (telephone exchange privileges are available unless you specifically decline them on the Account Application).

Exchanges and purchases are effected at the share price next determined after receipt of a proper request (as described above under "Written Requests") by UMB Fund Services, Inc.

For federal income tax purposes, an exchange is treated as including a sale of Fund shares and could result in a capital gain or loss.

Exchanges are subject to the following restrictions:

- You are limited to four exchanges in one account during any calendar year;
- Shares must be owned 15 days before exchanging, and cannot be in certificate form unless you deliver the certificate when you request the exchange;
- An exchange requires the purchase of shares with a value of at least \$1,000; and
- Exchanges are subject to the same signature and signature guarantee requirements applicable to the redemption of shares.

For more information or for prospectuses for other FPA Funds, please contact a dealer or UMB Distribution Services, LLC. You should read the prospectuses of these other Funds and consider differences in objectives and policies before making any exchange.

Other Shareholder Services

Investment Account. Each shareholder has an investment account in which UMB Fund Services, Inc. holds Fund shares. You will receive a statement showing account activity after each transaction. Unless you make a written request, stock certificates will not be issued. Stock certificates are only issued for full shares.

In-Kind Transactions. Subject to procedures adopted by the Fund's Board of Trustees and at the Fund's sole discretion, you may pay for shares of the Fund with securities instead of cash.

The Fund has agreed to redeem shares, with respect to any one shareholder of record during any 90-day period, solely in cash up to the lesser of \$250,000 or 1% of the net asset value of the Fund at the beginning of the period. Pursuant to procedures adopted by the Fund's Board of Trustees, the

Fund reserves the right in its sole discretion to honor any redemption request in excess of the foregoing limits by making payment in whole or in part in readily marketable securities chosen by the Fund and valued as such securities are valued for purposes of computing the Fund's net asset value. If payment is made in securities, a shareholder may incur transaction expenses in converting those securities to cash, may realize, upon receipt, a gain or loss for tax purposes, and will be exposed to market risk prior to and upon the sale of such securities or other property.

Pre-authorized Investment Plan. You may establish an account with a \$100 minimum initial investment and the establishment of automatic monthly investments of at least \$100. To make automatic monthly investments, you must complete the Account Application available from dealers or UMB Distribution Services, LLC. UMB Fund Services, Inc. will withdraw funds from your bank account monthly for \$100 or more as specified through the Automated Clearing House.

Retirement Plans. A retirement plan account and/or an IRA can be established with a \$100 minimum initial investment and an expressed intention to increase the investment to \$1,500 within 12 months. No minimum is imposed for subsequent investments in these accounts. UMB Fund Services, Inc. currently charges a \$15 distribution fee for each redemption or recharacterization from a retirement account. UMB Fund Services, Inc. also charges an annual account maintenance fee of \$15 on retirement accounts.

You should consult your tax adviser about the implications of investing in Fund shares through a retirement account. Persons with earned income ineligible for deductible contributions generally may make non-deductible contributions to an IRA. The earnings on shares held in an IRA are generally tax-deferred. In addition, although contributions to a Roth IRA are not deductible, earnings in the account generally are not taxed even on withdrawal. Retirement-related tax matters are complicated and you should consult your tax adviser about them. UMB Distribution Services, LLC and dealers have applicable forms and information regarding plan administration, custodial fees and other plan documents.

Systematic Withdrawal Plan. If you have an account with a value of \$10,000 or more, you can make monthly, quarterly, semi-annual or annual withdrawals of \$50 or more by electing this option on the Account Privileges Change Form. Under this arrangement, sufficient Fund shares will be sold to cover the withdrawals and the proceeds will be forwarded to you as directed on the Account Privileges Change Form. If withdrawals continually exceed reinvestments, your account will be reduced and ultimately exhausted. Please note that concurrent withdrawals and purchases are ordinarily not in your best interest and you will generally recognize any taxable gains or losses on the withdrawals.

Shareholder Servicing Arrangements. Brokers, dealers, banks, trust companies and other financial representatives may receive compensation from the Fund or its service providers for providing a variety of services. This section briefly describes how the financial representatives may be compensated.

For providing certain services to their clients, financial representatives may be paid a fee based on the assets or number of accounts of the Fund that are attributable to the financial representative. These services may include recordkeeping, transaction processing for shareholders' accounts and

certain shareholder services not currently offered to shareholders that deal directly with the Fund. In addition, your financial representatives may charge you other account fees for buying or redeeming shares of the Fund or for servicing your account. Your financial representative should provide you with a schedule of its fees and services.

The Fund may pay all or part of the fees paid to financial representatives. The Fund does not pay these service fees on shares purchased directly. In addition, the Adviser may, at its own expense, pay financial representatives for these services.

UMB Distribution Services, LLC, the Fund's principal underwriter, may enter into agreements with selling dealers where the selling dealer waives its right to shareholder servicing fees for selling Fund shares or servicing shareholder accounts. These arrangements typically are intended to avoid duplicate payment of fees where the selling dealer's transactions are through an omnibus account with a different clearing broker and that broker is entitled to receive shareholder servicing fees from the Fund.

The Adviser may, at its own expense and out of its own resources, pay financial representatives for distribution and marketing services performed with respect to the Fund. These payments by the Adviser may include one or more of the following types of payments: one-time account establishment fees, annual per-account fees and/or annual asset-based charges. These payments may create a conflict of interest by influencing the broker or financial intermediary and your salesperson to recommend the Fund over another investment. For more information, ask your salesperson or visit your financial intermediary's website.

Distributions and Taxes

DISTRIBUTIONS

The Fund earns income from its investments and distributes that income, if and to the extent it exceeds expenses, to its shareholders as dividends. The Fund also realizes capital gains and losses from the sale or exchange of its investments and distributes any net capital gains to its shareholders as capital gain distributions (as used in this section, together with income dividends, "distributions"). The Fund distributes any distributions at least annually.

Distributions the Fund pays may be reinvested automatically in Fund shares at net asset value or taken in cash. If your account is held directly with the Fund and you would like to receive distributions in cash, contact UMB Fund Services, Inc. at 800-638-3060. If your account is with a securities dealer or other financial intermediary that has an agreement with the Fund, contact your dealer or intermediary about which option you prefer.

TAXES

Except for tax-advantaged retirement plans and accounts and other tax-exempt investors, all Fund distributions you receive generally are subject to federal income tax, whether you receive them in cash or reinvest them in additional shares. Fund distributions to IRAs (including Roth IRAs) and qualified retirement plans generally are tax-free.

Distributions of net investment income, the excess of net short-term capital gain over net long-term capital loss, and net gains (if any) from certain non-U.S. currency transactions (*i.e.*, “dividends”) are generally taxed as ordinary income. The Fund’s dividends attributable to “qualified dividend income” (generally, dividends it receives on stock of most U.S. and certain non-U.S. corporations with respect to which the Fund satisfies certain holding period and other restrictions) are subject to federal income tax for individual and certain other non-corporate shareholders (each, an “individual shareholder”) who satisfy those restrictions with respect to their Fund shares at the rates for long-term capital gains—a maximum of 15% or 20%, depending on whether the individual shareholder’s income exceeds certain threshold amounts.

Distributions of net capital gain (*i.e.*, the excess of net long-term capital gain over net short-term capital loss) are generally taxed as long-term capital gain and, for individual shareholders, are subject to the 15% or 20% maximum federal income tax rates mentioned above. The tax treatment of capital gain distributions from the Fund depends on how long the Fund held the securities it sold that generated the gain, not when you bought your Fund shares or whether you reinvested your distributions.

Fund distributions generally are taxable to you in the year you receive them. In some cases, however, distributions you receive in January are taxable as if they had been paid the previous December 31.

When you sell (redeem) Fund shares, including pursuant to an exchange, you generally will realize a taxable gain or loss. An exception, once again, applies to tax-advantaged retirement plans and accounts and other tax-exempt investors. Any capital gain that an individual shareholder recognizes on a redemption of his or her Fund shares that have been held for more than one year will qualify for the 15% or 20% maximum federal income tax rates mentioned above.

The federal income tax you actually owe on Fund distributions and share transactions can vary with many factors, such as your marginal tax bracket, how long you held your shares and whether you owe federal alternative minimum tax. Shortly after the end of each calendar year, the Fund will send you a tax statement that will detail the distributions you received during that year and will show their tax status. This may be separate from the statement that covers your share transactions. Most importantly, consult your tax professional. Everyone’s tax situation is different, and your tax professional should be able to help you answer any questions you may have.

The Fund is required to withhold 28% of the money you are otherwise entitled to receive from its distributions and redemption proceeds (regardless of whether you realize a gain or loss) if you are an individual shareholder who fails to provide a correct taxpayer identification number to the Fund (together with the withholding described in the next sentence, “backup withholding”). Withholding at that rate also is required from the Fund’s distributions to which you are otherwise entitled if you are such a shareholder and the Internal Revenue Service (“Service”) tells the Fund that you are subject to backup withholding or you are subject to backup withholding for any other reason. Backup withholding is not an additional tax, and any amounts so withheld may be credited against a shareholder’s federal income tax liability or refunded.

If you buy shares when the Fund has earned or realized, but not yet distributed, ordinary income or net capital gains, you will be “buying a dividend” by paying the full price of the shares and then

receiving a portion of the price back in the form of a taxable distribution. You can avoid this situation by waiting to invest until after the record date for the distribution.

Distributions are taxable to you even if they are paid from income or gain earned by the Fund before your investment (and thus were included in the price you paid for your Fund shares).

Generally, if you are investing in the Fund through a tax-advantaged retirement plan or account, distributions paid by the Fund are not taxable to you on a current basis (but may be taxable upon withdrawal from such plan or account).

An individual is required to pay a 3.8% tax on the lesser of (1) the individual's "net investment income," which generally includes distributions the Fund pays and net gains realized on the redemption or exchange of Fund shares, or (2) the excess of the individual's "modified adjusted gross income" over a threshold amount (\$250,000 for married persons filing jointly and \$200,000 for single taxpayers). This tax is in addition to any other taxes due on that income. A similar tax applies to estates and trusts. Shareholders should consult their own tax advisers regarding the effect, if any, this provision may have on their investment in Fund shares.

A Fund shareholder's basis in Fund shares he or she acquired or acquires after December 31, 2011 ("Covered Shares"), will be determined in accordance with the Fund's default method, which is HIFL (highest in, first long-term) basis, unless the shareholder affirmatively elects in writing (which may be electronic) to use the average basis method or a different acceptable basis determination method (*e.g.*, a specific identification method). The method a Fund shareholder elects (or the default method) may not be changed with respect to a redemption of Covered Shares after the settlement date of the redemption.

In addition to the requirement to report the gross proceeds from the redemption of shares, the Fund (or its administrative agent) must report to the Service and furnish to its shareholders the basis information for Covered Shares and indicate whether they had a short-term (one year or less) or long-term (more than one year) holding period. Fund shareholders should consult with their tax advisers to determine the best Service-accepted basis method for their tax situation and to obtain more information about how the basis reporting law applies to them.

Shareholders other than U.S. persons may be subject to a different U.S. federal income tax treatment, including withholding tax at the rate of 30% on amounts treated as ordinary dividends from the Fund, as discussed in more detail in the SAI.

This section summarizes some of the consequences under current federal income tax law of an investment in the Fund. It is not a substitute for personal tax advice. **Consult your tax adviser about the potential tax consequences of an investment in the Fund under all applicable tax laws.**

Financial Highlights

The financial highlights table is intended to help you understand the Fund's financial performance for the past five years. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund purchased at net asset value and assuming reinvestment of all dividends and distributions. The information for each of the five years ended December 31 have been audited by Deloitte & Touche LLP, an independent registered public accounting firm, whose report dated February 21, 2017, along with the Fund's financial statements and related notes, is included in the Fund's annual report, which is available upon request.

| | Year Ended December 31, | | | | |
|--|-------------------------|---------------|---------------|---------------|--------------|
| | 2016 | 2015 | 2014 | 2013 | 2012 |
| Per share operating performance: | | | | | |
| Net asset value at beginning of year | \$ 31.06 | \$ 33.74 | \$ 32.96 | \$ 29.29 | \$ 26.78 |
| Income from investment operations: | | | | | |
| Net investment income* | 0.24 | 0.18 | 0.25 | 0.14 | 0.12 |
| Net realized and unrealized gain (loss) on investment securities | 2.93 | (0.89) | 1.94 | 6.02 | 2.63 |
| Total from investment operations | \$ 3.17 | \$ (0.71) | \$ 2.19 | \$ 6.16 | \$ 2.75 |
| Less distributions: | | | | | |
| Dividends from net investment income | (0.29) | (0.31) | (0.31) | (0.21) | (0.12) |
| Distributions from net realized capital gains | (1.34) | (1.66) | (1.10) | (2.28) | (0.12) |
| Total distributions | \$ (1.63) | \$ (1.97) | \$ (1.41) | \$ (2.49) | \$ (0.24) |
| Redemption fees | 0.01 | —** | —** | —** | —** |
| Net asset value at end of year | \$ 32.61 | \$ 31.06 | \$ 33.74 | \$ 32.96 | \$ 29.29 |

OTHER FUND INFORMATION**Annual/Semi-Annual Report to Shareholders**

Additional information about the Fund's investments and performance is available in the Fund's annual and semi-annual reports to shareholders. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year. The Fund's SAI, annual and semi-annual report, quarterly schedules of portfolio holdings on Form N-Q and the annual report of proxy voting record on Form N-PX are available without charge, upon request, by calling UMB Distribution Services, LLC and on the Securities and Exchange Commission's ("SEC") Internet Web Site at <http://www.sec.gov>.

Statement of Additional Information (SAI)

The SAI contains more detailed information on all aspects of the Fund. A current SAI has been filed with the SEC and is incorporated by reference into this prospectus. The SAI and other related materials about the Fund are available for review or to be copied at the SEC's Public Reference Room in Washington, D.C. (1-202-551-8090) or from the EDGAR database on the SEC's Internet Web Site at <http://www.sec.gov>, and copies of this information may be obtained, upon payment of a duplicating fee, by electronic request at publicinfo@sec.gov or by writing the Public Reference Section of the SEC, Washington, D.C. 20549-1520.

For more information or to request a free copy of any of the documents above contact UMB Distribution Services, LLC at 235 West Galena Street, Milwaukee, Wisconsin 53212, or (800) 982-4372, except from Alaska, Hawaii, Puerto Rico and U.S. Virgin Islands (where you may call collect (310) 473-0225), or go to <http://www.fpafunds.com>.
